

Name	CAT-N (COMPREHENSIVE APHASIA TEST)
Purpose:	Test for use with people who have acquired aphasia.
Short description:	<p data-bbox="560 264 1380 369">CAT-N is a general aphasia test that assess language skills. The test consists of three parts: a cognitive screening, a language battery and a questionnaire about living with aphasia.</p> <p data-bbox="560 409 1380 728">The cognitive section assesses people’s abilities across a range of tasks that can affect rehabilitation. The language battery provides a profile of performance across all modalities of language production and comprehension, including auditory comprehension, oral language production, reading and writing. The Aphasia Impact Questionnaire (IAQ) is a self-report questionnaire where the person with aphasia can express their own experiences living with aphasia and give a subjective rating of how language difficulties affect their daily life.</p>
Academic area/skills:	Language
Target group:	People with aphasia
Survey method:	Individual
Standardization:	Standardized
Adapted/non-adapted to Norwegian conditions:	Norwegian version
Published:	<p data-bbox="560 949 925 987">English original version (2004)</p> <p data-bbox="560 987 874 1025">Norwegian version (2021)</p>
