

Name	HAUKELAND AFASI SCREENING TEST (HAST)
Purpose:	To uncover language difficulties at different levels
Short description:	HAST contains assessing material that, as early as possible after the injury, must be able to provide information about the difficulties of a person with acquired aphasia. This test is designed to reveal language difficulties at different levels. HAST is a help to rapidly assess aphasia patients and it is intended for speech therapists who work at the hospital. Speech therapists who get in touch with patients later on, can use this test when it comes to diagnosis and treatment of light aphasia difficulties
