

Name	FONOLOGISK VENDESPILL (FV`13)
Purpose:	To enhance phonological awareness: to listen and to separate speech sounds. Fonologisk Vendespill is also suitable for working with more general linguistic awareness, such as impressive and expressive vocabulary and different word classes.
Short description:	FV`13 is a revised and pdf-based edition of Bo Eges "Fonologiske Vendespill". The material consists of an instruction booklet, a glossary and 1268 picture cards. The glossary is based on the frequency, consonant-vowel combinations and phonemic orthography of different Norwegian words. The picture cards are divided into five categories: blue, green, yellow, red and purple. The instruction booklet presents tips and advice for various language games, using the picture cards. The language games can also be used to practice different speech sounds, as well as facilitate a more general language stimulation.
Academic area/skills:	Phonological and linguistic awareness
Target group:	School children (children with phonological awareness difficulties)
Adapted/non-adapted to Norwegian conditions:	Norwegian edition
Published:	Not stated
Author:	Ege, B. & Thomsen, M.
User groups/user qualifications:	Speech-language pathologists, pedagogues, teachers, parents
